Sentiment Analys...

6 Does review length vary by sentiment?

This box plot compares the length of reviews across different sentiment categories.

This analysis highlights geographic regions where users express the strongest positive or negative sentiment, helping identify location-based experience issues.

This comparison helps identify whether users on different platforms (such as Web or Mobile) report different sentiment patterns.

9 Which ChatGPT versions are associated with higher or lower sentiment?

This visualization shows sentiment distribution across different ChatGPT versions to assess whether version updates impacted user satisfaction.

10 What are the most common negative feedback themes?

Frequent keywords from negative reviews are extracted to identify recurring pain points and user complaints.

	Keyword	Frequency
0	leave	10
1	loss	8
2	group	8
3	piece	8
4	short	8
5	good	7
6	recently	7
7	pm	7
8	finish	7
9	goal	7
